Education

Purdue University:
B.S. Aeronautical and Astronautical Engineering, B.A. Political Science Class of 2027
AAE: Specialization in Autonomy and Controls. Political Science: Concentration in International Affairs
Cumulative GPA: 3.7/4.0, *College of Engineering Dean's Honor List + Semester Honors to date*

Experience

GTM Strategy & Operations Intern - *forml* August 2026 - Present

- Defined Forml's ideal customer profile using 50+ historical deals, building a weighted scoring model that replaced a headcount-based rule that would have excluded ~75% of the pipeline.
- Built Forml's prospecting infrastructure by consolidating fragmented lead sources into a scored account and contact database and standardizing qualification and enrichment workflows for CRM migration.
- Sourced and ranked 150+ lender and broker accounts for deBanked, Funders Forum, and Broker Expo NY; led executive outreach that generated 20+ conversations.
- Redesigned Forml's public website end to end in under three weeks, rewriting positioning, information architecture, and messaging around lender buyers and a security-first sales narrative.

Cofounder - *Hoot* August 2025 - Present

- Won faculty sponsorship at Purdue, securing $24k in research funding and a live pilot across four courses
- Built Apollo, the platform's core tutoring engine: students explain concepts in their own words, and the system diagnoses gaps against a course knowledge graph and delivers targeted feedback.
- Shipped the product with one co-founder, owning front-end, UX, and source-cited answer generation over instructor-uploaded course materials.
- Designed a three-arm randomized controlled trial with faculty coauthors to measure which AI tutoring functions improve retained learning rather than test-time performance.

SWE Intern - *Bling Cloud* July 2025 - September 2025

- Designed and built a real-time voice resume bot in Python that interviews users and produces PDF and narrated resumes; scaled to 50+ concurrent sessions.

Projects

Furuta Pendulum - *Dartra Dynamics* August 2025 - November 2025

- Designed, built, and simulated a Furuta pendulum from scratch: derived the dynamics, implemented a three-mode LQR control architecture on a Teensy 4.1, and designed and machined custom components using SolidWorks and NX.
- Achieved real-time swing-up and upright stabilization; created content documenting the build that reached 2.5M+ views on Instagram (@dartra10).

RC Car Endurance Project - *Cofounder and Design Lead* January 2022 - July 2022

- Co-founded and led a six-person team that designed and built a remote-controlled car setting the Guinness world record for distance on a single charge (72.33 mi); taught five teammates SolidWorks.

Skills & Interests

Technical: Python, SQL, TypeScript/JavaScript, React/Next.js, FastAPI, Git, MATLAB, SolidWorks, NX
Languages: Fluent in Mandarin and Hindi
Interests: Climbing, basketball, piano, Clash Royale (Ultimate Champion rank)
